Gasket Replacement Guide: Model 97 Lighthoods

Installation...

1. Remove the four phillips-head screws that secure the lens to the reflector.
2. Remove the lens from the reflector.
3. Using a gasket remover (or similar tool), remove the existing silicone gasket from the lens.

IMPORTANT: Do not allow the gasket removal tool to gouge, scratch or disfigure the lens in any way!

4. If you are installing a gasket on an early-style reflector, install the supplied double-sided tape in the reflector channels as shown (the tape is not needed on current-style reflectors). Now position the new gasket into the reflector channel.
5. Return the lens to its mounting location on the reflector. Be sure that the gasket is fully seated and is not being pinched or distorted by the lens.
6. Replace the lens mounting screws and re-tighten. Use hand-tools only; do not over-tighten.
