Installation/Operating Manual:
295HFS5-series Siren

Automotive: Sirens/Switches

Safety First

This document provides all the necessary information to allow your Whelen product to be properly and safely installed. Before beginning the installation and/or operation of your new product, the installation technician and operator must read this manual completely. Important information is contained herein that could prevent serious injury or damage.

- **Proper installation of this product requires the installer to have a good understanding of automotive electronics, systems and procedures.**
- **If mounting this product requires drilling holes, the installer MUST be sure that no vehicle components or other vital parts could be damaged by the drilling process. Check both sides of the mounting surface before drilling begins. Also de-burr any holes and remove any metal shards or remnants. Install grommets into all wire passage holes.**
- **If this product is mounted with tape or Velcro™, clean the mounting surface with a 50/50 mix of isopropyl alcohol and water and dry thoroughly.**
- **Do not install this product or route any wires in the deployment area of your air bag. Equipment mounted or located in the air bag deployment area will damage or reduce the effectiveness of the air bag, or become a projectile that could cause serious personal injury or death. Refer to your vehicle owners manual for the air bag deployment area. The User/Installer assumes full responsibility to determine proper mounting location, based on providing ultimate safety to all passengers inside the vehicle.**
- **For this product to operate at optimum efficiency, a good electrical connection to chassis ground must be made. The recommended procedure requires the product ground wire to be connected directly to the NEGATIVE (-) battery post.**
- **If this product uses a remote device to activate or control this product, make sure that this control is located in an area that allows both the vehicle and the control to be operated safely in any driving condition.**
- **Do not attempt to activate or control this device in a hazardous driving situation.**
- **It is recommended that these instructions be stored in a safe place and referred to when performing maintenance and/or reinstallation of this product.**
- **FAILURE TO FOLLOW THESE SAFETY PRECAUTIONS AND INSTRUCTIONS COULD RESULT IN DAMAGE TO THE PRODUCT OR VEHICLE AND/OR SERIOUS INJURY TO YOU AND YOUR PASSENGERS!**

WARNING!

DISCONNECTING THE VEHICLE BRAKE LAMP CIRCUIT USING ANY SIRENS WITH RELAY OUTPUTS OR SWITCH CONTROLLERS COULD CAUSE VEHICLE OR PROPERTY DAMAGE, SERIOUS INJURY OR EVEN DEATH.

DISABLING THIS CIRCUIT IS A VIOLATION OF THE FEDERAL MOTOR VEHICLE SAFETY STANDARD FOR THE THIRD BRAKE LIGHT, AS WELL AS REAR BRAKE LIGHTS.

FUNCTIONS THAT BLACK OUT THE REAR BRAKE LIGHTS (SOMETIMES CALLED “BRAKE LIGHT CUT OUT”) MAY INTERFERE WITH THE BRAKE SHIFT LOCK MECHANISM, AND CAUSE THE VEHICLE TO MOVE UNEXPECTEDLY AND DANGEROUSLY.

DISCONNECTING THE BRAKE LIGHTS IN ANY WAY IS AT YOUR OWN RISK AND IS NOT RECOMMENDED BY WHELEN.

Installation...

The 295HFS5, although technologically advanced, is simple to install. An aftermarket center console is recommended for the mounting location of the 295HFS5. This not only allows the driver to reach the controls easily, but also keeps the unit safely out of the path of the vehicle's SRS air-bag. Follow the console manufacturer's instructions for mounting information.

If a console-type mount is not possible, the 295HFS5 includes a bail strap mounting kit for over- or under-dash mounting. **Important Note!** If dash mounting is chosen, the installer **must** confirm that the unit is not being installed in an air-bag deployment zone. Failure to do so could result in the interference of the air-bag's ability to function properly. The air-bag deployment zones can be found in the vehicle's owner manual. The same precautions apply when selecting the microphone hanger location.

The following steps will guide you through the installation process:

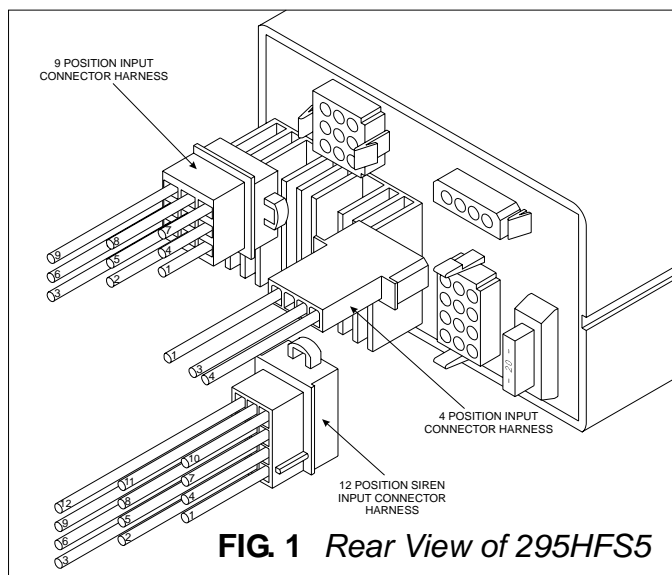

FIG. 1 Rear View of 295HFS5

READ BEFORE INSTALLING!!!

Do not install this product or route any wires in the deployment area of your airbag. Equipment mounted or located in the airbag deployment area will damage or reduce the effectiveness of the airbag, or become a projectile that could cause serious personal injury or death. Refer to your vehicle owners manual for the air bag deployment area.

The User/Installer assumes full responsibility to determine proper mounting location, based on providing ultimate safety to all passengers inside the vehicle. Whelen Engineering Company assumes no liability or responsibility for determining individual applications or exact installation location criteria.

Connections For The 12 Position Siren Input Harness

Connecting The Power & Ground wires (Red and Black)

1. Remove the driver's side front seat.
2. Remove the front, driver's side rocker sill plate and kick panel.
3. Fold back the floor covering so that access is gained to the factory wire harness routed under the driver's seat area.
4. Insert the wiring harness into its port as shown in Fig. 1.
5. Extend the two RED and two BLACK wires, from the 12-position connector on the rear panel of the 295HFS5, toward the sill plate location. Follow the same path as the factory wire harness.

WARNING: All customer supplied wires that connect to the POSITIVE (+) terminal of the battery must be sized to supply at least 125% of maximum operating current & be fused at the battery to carry that load!

6. Continue to follow the factory harness through the firewall. To pass the RED and BLACK wires through, it may be necessary to drill a hole in the firewall. If so, be absolutely sure that there are no components that could be damaged by drilling. After the hole is drilled, insert a grommet to protect the wires.
7. Route the RED and BLACK wires along the factory harness towards the battery.
8. Install a 20 amp fuse block (user supplied) on the end of the RED wires.

NOTE: Remove the fuse from the fuse block before connecting any wires to the battery!

9. Connect the fuse block wire to the POSITIVE (+) terminal on the battery. There must not be more than two (2) feet of wire between the fuse block and the battery. As the wire between the fuse and the battery is “unprotected”, do not allow this wire to come in contact with any other wires!
10. Connect the BLACK wire to the factory chassis ground, adjacent to the battery.

Connecting The 295HFS5 Speaker Wires (Yellow, Orange & Brown)

Note: This section outlines a two-speaker installation. If a one-speaker installation is used, cut and cap the ORANGE wire, skip step 3 and connect the BROWN wire to the NEGATIVE terminal of speaker #1.

1. Route the YELLOW, ORANGE and BROWN wires toward the vehicle’s siren speakers.
2. Connect the YELLOW wire to the POSITIVE speaker connection on speaker #1.
3. Connect the ORANGE wire to the POSITIVE speaker connection on speaker #2.
4. Connect the BROWN wire to the NEGATIVE speaker connection on speaker #2.
5. Splice a wire from the NEGATIVE speaker connection on speaker #2 to the NEGATIVE speaker connection on speaker #1.

(Optional) Connecting The 295HFS5 Horn Relay Wires (White & Grey)

1. Route the WHITE and GREY wires along the factory wire harness and through the firewall at the same point as the RED and BLACK wires.
2. Locate your vehicle’s horn relay and route the WHITE and GREY wires to this. If possible, follow the factory wire harness to this relay.
3. Locate the wire that connects the vehicle horn to the horn relay. Cut this wire.
4. Connect the WHITE wire to the wire coming from the horn relay.
5. Connect the GREY wire to the wire coming from the horn.

NOTE: The two (2) BLUE wires are used to connect your two-way radio’s external speaker to the 295HFS5 for radio re-broadcast. This is an optional connection and does not effect the other operations of the siren.

(Optional) Wiring The 295HFS5 Radio Rebroadcast wires (BLUE)

1. Locate the two wires that connect the external speaker to the vehicle’s two-way radio.
2. Cut one of these wires and splice one of the BLUE wires into this circuit.
3. Cut the remaining speaker wire and splice the remaining BLUE wire into this circuit.

NOTE: Radio re-broadcast will NOT work with amplified remote speakers! If your remote speaker is amplified (Contains a power amp circuit in the speaker assembly), do not enable the radio re-broadcast feature.

(Optional) Wiring The 295HFS5 For Park-Siren-Kill (Violet)

The 295HFS5 can be configured to cease all siren tones whenever the vehicle’s transmission is in park. This feature is automatically enabled when the VIOLET wire is connected to the transmission’s neutral safety switch. If this feature is not desired, cut and cap the VIOLET wire.

12 POSITION INPUT CONNECTOR ASSEMBLY

HOUSING POSITION	COLOR	FUNCTION
1	RED	BATTERY (POS.)
2	BLACK	CHASSIS GROUND
3	BLUE	TWO-WAY RADIO (OPTIONAL)
4	RED	BATTERY (POS.)
5	BLACK	CHASSIS GROUND
6	BLUE	TWO-WAY RADIO (OPTIONAL)
7	BROWN	SPEAKER #1 (NEG.)* SPEAKER #2 (NEG.)**
8	ORANGE	SPEAKER #2 (POS.)
9	VIOLET	PARK-SIREN-KILL
10	GRAY	TO VEHICLE HORN
11	WHITE	TO HORN RELAY
12	YELLOW	SPEAKER #1 (POS.)

*--CONNECT TO SPEAKER #1 WHEN A SINGLE SPEAKER INSTALLATION IS USED
 **--CONNECT TO SPEAKER #2 WHEN A DUAL SPEAKER INSTALLATION IS USED

Connections For The 9 Position Input Harness

NOTE: The push-button and slide switch control wires are designed to activate relays with a coil rating no greater than 250 ma. Do not attempt to connect these wires to any circuit that carries a higher rating!

Connecting The Slide-Switch Control wires (Green, Grey & Blue)

1. Route and connect the GREEN wire to the desired lightbar function control wire.
2. Route and connect the GREY wire to the desired lightbar function control wire.
3. Route and connect the BLUE wire to the desired lightbar function control wire.

Configuring The Slide-Switch Control Functions

In the default configuration (as shipped from the factory), the slide switch is configured as follows:

Slide Position #0No wires active

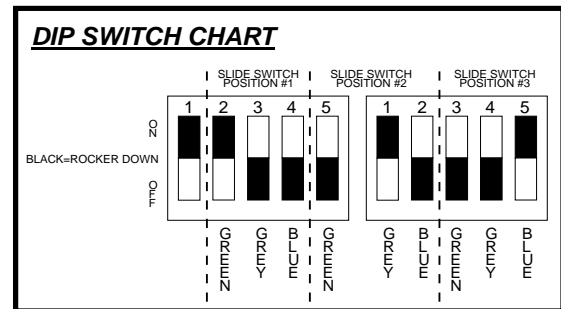

Slide Position #1GREEN wire = ACTIVE, GREY wire = inactive, BLUE wire = inactive

Slide Position #2GREEN wire = inactive, GREY wire = ACTIVE, BLUE wire = inactive

Slide Position #3GREEN wire = inactive, GREY wire = inactive, BLUE wire = ACTIVE

The slide switch configuration can be altered so that any combination of these three wires may be active or inactive in any of the three functioning slide positions. The slide switch configurations are controlled by two Dip Switch banks which are located on the top circuit board of the 295HFS5. Before proceeding, disconnect all of the input harness connectors from the rear of the 295HFS5.

Access to the Dip Switch banks is gained by removing four small phillips-head screws located at the four corners of the 295HFS5 face plate. With these screws removed, slide the chassis housing cover towards the rear of the 295HFS5. It is not necessary to slide this cover more than a few inches, as the Dip Switch banks are located just behind the control panel.

The Dip Switch Chart illustrates how the dip switches are configured. As shown, the configuration for slide switch position #1 is controlled by dip switch #'s 2, 3 & 4 on bank 1. Dip switch #2 (which controls the GREEN wire) is in the ON position, while #3 (GREY wire) & #4 (BLUE wire) are in the off position. This means that when the slide switch is moved to position #1, the GREEN wire alone becomes active.

Slide switch position #2 is controlled by dip switch #5 on bank 1, and by dip switch #1 and #2 on bank 2. In the default configuration, dip switch #5 (GREEN wire) is off, dip switch #1 (GREY wire) is ON and dip switch #2 (BLUE wire) is off. This means that when the slide switch is moved to position #2, the GREY wire alone is active, while the GREEN and BLUE wires are inactive.

Slide switch position #3 is controlled by dip switch 's 3, 4 & 5 on bank 2. In the default configuration, dip switch #3 (GREEN wire) is off, dip switch #4 (GREY wire) is off and dip switch #5 (BLUE wire) is ON. This means that when the slide switch is moved to position #3, the BLUE wire alone is active, while the GREEN and GREY wires are inactive.

Enabling Siren Tones through Slide Switch Position #3

Slide switch position #3 is configured to automatically activate siren tones (in default configuration). If this is not desired, make sure that dip switch #1 on bank 1 is in the off position. Please note that siren activation through slide switch position #3 is only available when the 295HFS5 power switch is in the ON position.

Connecting the Push-Button Control Wires (Violet, White, Yellow, Orange and White/Black)

The 295HFS5 push button switches control the following wires:

P-BUTTON #1 WHT/BLK

P-BUTTON #2 WHITE

P-BUTTON #3 YELLOW

P-BUTTON #4 ORANGE

P-BUTTON #5 SEE "Connections For The 4 Position Input Harness" Input Harness"

P-BUTTON #6 VIOLET (Note: p-button #6 is a momentary switch. This switch is best used for momentary-use circuits such as trunk release or gun lock.)

9 POSITION INPUT CONNECTOR ASSEMBLY

HOUSING POSITION	COLOR	FUNCTION
1	GREEN	SEE DIP SWITCH CHART
2	BROWN	+12 VDC
3	VIOLET	PUSH-BUTTON SWITCH #6 (MOMENTARY)
4	BLUE	SEE DIP SWITCH CHART
5	GREY	SEE DIP SWITCH CHART
6	WHITE	PUSH-BUTTON SWITCH #2 (SP/ST)
7	YELLOW	PUSH-BUTTON SWITCH #3 (SP/ST)
8	ORANGE	PUSH-BUTTON SWITCH #4 (SP/ST)
9	WHITE/BLACK	PUSH-BUTTON SWITCH #1 (SP/ST)

Connections For The 4 Position Input Harness

The 4 position input assembly is comprised of three wires that are to be connected as follows:

RED To +12 VDC fused @ 3 amps (customer supplied fuse)

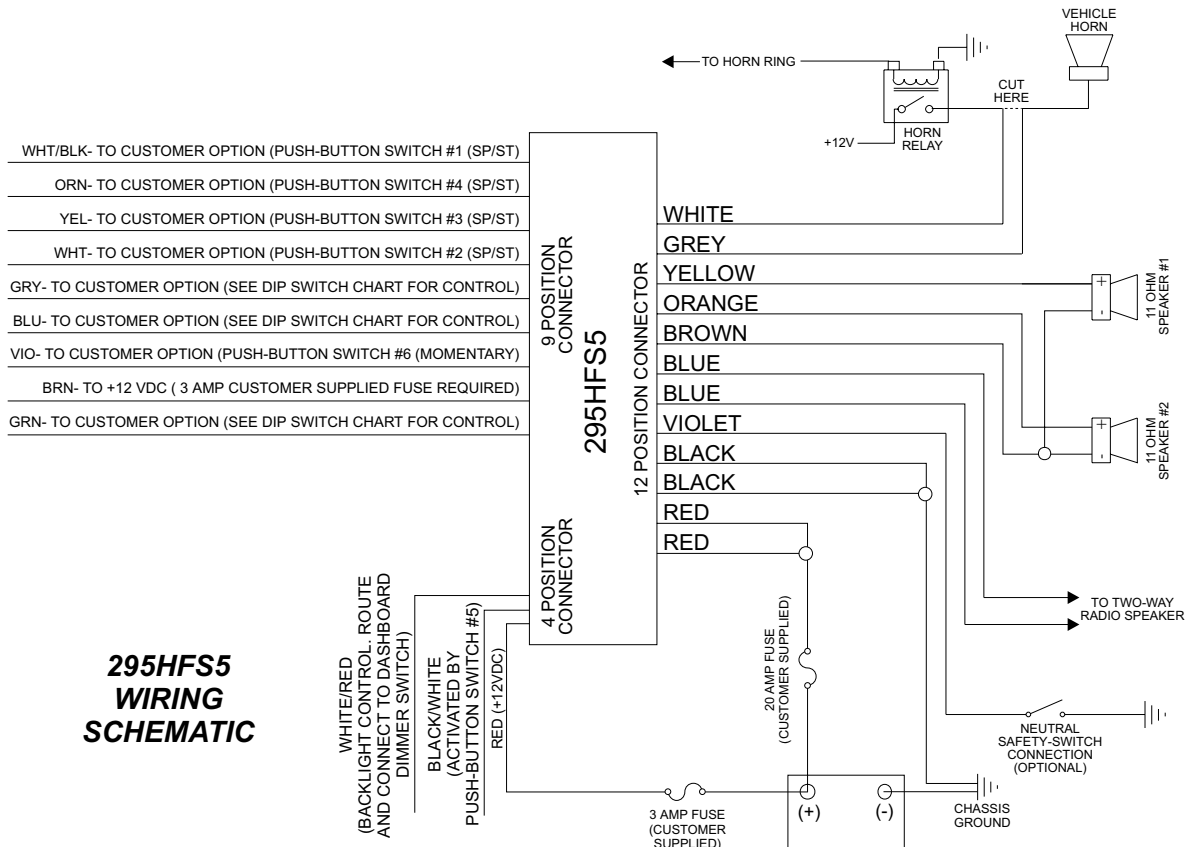

WHITE/RED To the vehicle's dashboard dimmer control switch (this allows the 295 HFS5 backlight to match dashboard light intensity).

BLACK/WHITE is controlled by push-button switch #5.

NOTE: This push-button control wire is designed to activate a relay with a coil rating no greater than 250 ma. Do not attempt to connect this wire to any circuit that carries a higher rating!

4 POSITION INPUT CONNECTOR ASSEMBLY

HOUSING POSITION	COLOR	FUNCTION
1	RED	+12 VDC
2	NOT USED	NONE
3	WHITE/RED	BACKLIGHTING (OPTIONAL)
4	BLACK/WHITE	PUSH-BUTTON SWITCH #5 (SP/ST)

To Adjust the Radio Repeat Levels...

Before using the 295HFS5, the Radio Repeat output volume must be adjusted to satisfactory operating levels. To adjust this level, a small, flat blade screwdriver is needed.

Radio Repeat Volume

Locate the Radio Repeat adjustment port (potentiometer) to the right of the rotary knob. Set the volume level of the vehicle's two-way radio to its normal operating volume. Turn the Rotary Knob to RAD to activate Radio Repeat. Insert the screwdriver in the Radio Repeat adjustment port and turn in a clockwise direction to increase the sound to its maximum desired volume.

Microphone Volume Knob (PA)

Locate the Microphone adjustment knob above the microphone cord. With the vehicle in an enclosed area, turn the Rotary Knob to PA and speak into the microphone. While speaking, turn the volume knob in a clockwise direction to increase the volume. Continue to increase the PA volume until audio feedback occurs. Turn the knob in a counter-clockwise direction to eliminate feedback and set the PA level to maximum volume

Operating the 295HFS5 controls...

Power Switch

This switch has two positions: Down (295HFS5 - Off) and Up (295HFS5 - On). When this switch is in the Off position, the WS295HFS will not function. When the switch is in the On position the siren is functional and may be activated at the operator's discretion. **NOTE:** If the 295HFS5 is connected to the vehicle's horn ring circuit, the vehicle horn is disabled when the 295HFS5 power switch is in the ON position.

MAN Button

The Manual button generates a variety of tones, depending on what position the Rotary knob is in. For further explanation of this button's function, refer to the Rotary knob section of this manual.

Rotary Knob

The Rotary Knob controls the siren and PA (Public Address) functions of the 295HFS5. There are 7 positions that may be selected. Each position and its function is outlined below:

RAD (Radio Repeat) - When the rotary knob is in the RAD position, any signal that is received by the vehicle's two-way radio will be simultaneously broadcast over the vehicle's loudspeaker (the 295HFS5 must be connected to the two-way radio as outlined in manual). This function overrides any other siren function.

PA (Public Address) - When the rotary knob is in the PA position, public address functions are operational. Messages may be broadcast over the vehicle's loudspeaker when the 295HFS5 microphone is in use. The volume level of PA transmissions is controlled by the volume knob. If the Manual button is pressed while the rotary knob is in this position, an "air horn" siren tone will be generated by your vehicle's loudspeaker. This tone is generated until the Manual button is released. The "air horn" may also be generated by pressing the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the siren).

MAN (Manual Siren) - When the rotary knob is in the MAN position, pressing the Manual button generates a tone that rises in pitch to a pre-set level. This tone is generated for as long as the Manual button is pressed. The same tone may be generated by pressing the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the 295HFS5). Please note that the 295HFS5 microphone will override the siren function. The MAN button is also used to activate the SI-TEST® cycle. See the SI-TEST® section on the following page for details on this important function.

HF (Hands Free Operation) - When the rotary knob is in the HF position, the siren functions of the 295HFS5 are placed in a stand-by mode. Siren tones are activated by a single "tap" on the MAN button or a single "tap" on the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the siren). The first "tap" produces a "Wail" tone (a steady, rise and fall tone). A second "tap" produces a "Yelp" tone (a fast, rise and fall tone). A third "tap" produces a "Piercer™" tone (an extremely fast, rise and fall tone). The next "tap" returns the siren to a "Wail" tone and the cycle repeats itself. Two quick, successive "taps" will stop the siren.

WAIL (Wail Tone) - When the rotary knob is in the WAIL position, a steady, rise and fall tone is produced. A single "tap" on the MAN button or a single "tap" on the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the 295HFS5), changes the siren tone to a "Yelp" pattern (a fast, rise and fall tone). A second "tap", and the siren returns to a "Wail" tone. Please note that the 295HFS5 microphone will override the siren function.

YELP (Yelp Tone) - When the rotary knob is in the YELP position, a fast, rise and fall tone is produced. Pressing the MAN button or the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the 295HFS5), changes the siren tone to a simulated air horn tone for as long as the button is pressed. Releasing the button causes the siren to return to the Yelp tone. Please note that the 295HFS5 microphone will override the siren function.

PIER (Piercer™ Tone) - (NOTE: Some models may have a Hi/Lo tone instead of the Piercer™ tone) When the rotary knob is in the PIER/Hi-Lo position, an extremely fast, rise and fall tone (alternating high and low tones for Hi-Lo) is produced. Pressing the MAN button or a single "tap" on the vehicle's steering wheel horn button (if the vehicle's horn has been wired to the 295HFS5), changes the siren tone to a simulated air horn tone for as long as the button is pressed. Releasing the button causes the siren to return to the "Piercer™" (Hi-Lo) tone. Please note that the 295HFS5 microphone will override the siren function.

SI-TEST®

SI-TEST® is a diagnostic feature of the 295HFS5 and allows the operator to confirm the proper operation of the siren speakers connected to the 295HFS5 without activating an audible siren tone. To initiate the SI-TEST® cycle, set the rotary knob to the RAD position. Now press and hold the MAN button for at least 5 seconds. As the siren is tested, its diagnostic indicator will turn on if no problems are detected. If the indicator doesn't light, a problem with

either the speaker or its connectors has been detected. Check the wire connections for the failed speaker and repeat the SI-TEST®. If the speaker fails the test again, have the siren itself inspected by a qualified technician. **NOTE:** Installed speakers are tested by generating an ultra-high frequency tone through each speaker. Although these tones are inaudible to humans, be sure that there is nobody within at least 5 feet of the vehicle's speakers when SI-TEST® is running.

295HFS5 SPECIFICATIONS

INPUT VOLTAGE 12.5 VDC
INPUT CURRENT @ 15 VDC @ 5.5 OHMS . . 16 AMPS MAX.
