Grommet & Rubber Pad Installation for Rotator Assemblies

Internet: www.whelen.com
Sales e-mail: autosale@whelen.com
Canadian Sales e-mail: autocan@whelen.com
Customer Service e-mail: custserv@whelen.com

Installation

Enclosed with your Rotator Assembly you will find a rubber pad and four grommets. These must be installed on your rotator assembly to decrease vibration that may cause damage to your rotator or rotator base. Follow the diagram. As shown, the rubber pad adheres to the lightbar base with the adhesive backing and must be placed under the motor. On the two grommets that don't get screws, you must cut the tabs off and put them through the mounting holes in the base, with the wide foot part of the grommet on the bottom. The two grommets that get the mounting screws attach as shown in the side view.
