The outer surfaces of this product may be cleaned with mild soap and water. Use of any other chemicals may void product warranty. Do not use a pressure washer.

NOTE: If you have a "Scenelight" lens, the date stamp on the lens must be located on the bottom when mounting.

Installation Instructions . . .

1. Examine the various mounting styles shown on page 2. Secure the housing to the mounting surface as shown in the illustration matching your application.
2. Flange mounting requires the use of the template on page 4 to prepare the mounting surface for installation. Use the templates on page 3 for "Cast" mounting dimensions.

NOTE: The mounting diagrams are not to scale. Use for reference only. **WARNING!** This installation requires drilling. It is necessary to make sure that nothing will be damaged in the process. If damage is possible, select another location.

3. Extend the appropriate cable from the designated power source to the selected mounting location.

IMPORTANT: All customer supplied wires that connect to the positive terminal of the battery must be sized to supply at least 125% of the maximum operating current and fused at the battery to carry that load.

4. Connect the wires to your power source. Be sure to test for proper operation of your lighthead prior to active field use or duty.
