Fig. 1 Top view of vehicle shows approximate location of mounting holes

Caution: Permanent mounting of this product will require drilling. It is absolutely necessary to make sure that no other vehicle components could be damaged by this process. Check both sides of the mounting surface before starting.

1. Lower the rear section of the headliner and locate the 2 existing holes in the vehicle roof shown in Figs. 1 & 2.
2. Enlarge these holes to a diameter of .391" using an appropriately sized drill bit.

IMPORTANT NOTE! This installation uses Rivnuts™ to secure the brackets to the vehicle. This type of hardware requires the use of a specialized installation tool. Refer to the owners manual included with this tool for proper installation techniques. Be sure to follow the mounting hole specifications precisely!

3. Securely tighten the two brackets to the two Rivnuts using the supplied metal screws and lock washers.

Fig. 2

4. Replace the headliner and make two small slits in the headliner for the brackets to go through.
5. Secure the lightbar to the two brackets.
6. Extend the lightbar wires to your power source and connect the wires as shown in the lightbar manual.

IMPORTANT! Before returning the vehicle to active service, visually confirm the proper operation of this product, as well as all vehicle components/equipment.
