Installation Guide:
Model 71170() Series
Models: 7117051, 7117052,
7117053, 7117054
P/N: 01-0771170-51, -52, -53, -54
LED Wingtip Anti-Collision /
Position Light Assembly

TSO-C30c
 TYPE I & II;
 APPROVED

TSO-C96a
 CLASS II;
 APPROVED

(Shroud not shown)

The conditions and tests required for TSO approval of this article are minimum performance standards. It is the responsibility of those installing this article either on or within a specific type or class of aircraft to determine that the aircraft installation conditions are within the TSO standards. TSO articles must have separate approval for installation in aircraft. The article may be installed only if performed under 14 CFR part 43 or the applicable airworthiness requirements.

SPECIFICATIONS:

Nominal Operational Voltage: 28 VDC
Input Current (with 7123403 Flasher):
 LED Position Light: 0.25 Amps
 LED Anti-Collision Light (Average): 0.53 Amps
 LED Anti-Collision Light (Pulse@0.25 sec.): 2.8 Amps
 Flashrate 45± 5 per min.

EQUIPMENT LIMITATIONS:

An approved forward position and anti-collision system consists of at least two lighthoods, one mounted on each wingtip mounted behind a clear lens, and each connected to a model 71234() Flasher.

Certain types of installations may require additional testing.

CONTINUED AIRWORTHINESS:

The wingtip anti-collision light is designed with 24 LEDs. The position light is designed with 6 LEDs. If any one fails, the unit must be repaired or replaced. NOTE: To reduce eye strain, use an optical filter (such as dark glasses or a blue covering dome) during LED inspection.

Note: The anti-collision lights will automatically shut-off after 9-10 flashes if a failure is detected.

SHROUD REMOVAL PROCEDURE:

If justified by the Aircraft installation and additional FAA testing of compliance to TSO-C30c and TSO-C96a the shroud may be removed.

1. Remove and discard the two, #6 screws that are used to secure the shroud. Carefully remove the shroud. **CAUTION:** Do not touch the LED lens.

INSTALLATION PROCEDURE:

The following information is to assist you in installing a Whelen anti-collision light system.

1. The installation procedure described in the following text will be confined to a single light installation, but is identical for multiple light installations.
2. Connect the inputs according to the chart shown. Connections to be in accordance with FAA approved methods.
3. Using appropriate, approved hardware, install light assembly and insure that all leads are clear of any obstructions and ty-rap as required. Secure light assembly, using vibration resistant threaded fasteners.
4. Check all avionics systems for interference from this installation.
5. A flight check should be performed by a properly certified pilot.
6. Update aircraft records, complete Form 337 and obtain FAA field approval for installation, as necessary.

Model 71170()

Model	Cable Details	Cable Length
-51,-52	MIL 22759/43 20 AWG wires, Abrasion-resistant Outer Jacket, RF Braid	24" ±1"
-53,-54	MIL 22759/43 20 AWG wires, Abrasion-resistant Outer Jacket, RF Braid	36" ±1"
