1. Disconnect the lightbar from the vehicle battery.
2. Using a Torx screwdriver, remove the endcap nearest to the installed location of the new lighthead.
3. Slide the necessary lenses and lens dividers out of the extrusion until the desired lighthead housing is accessible.
4. Using a small, flat blade screwdriver, gently disengage the lighthead housing’s retaining fingers from the filler panel’s mounting tabs and remove panel from the lightbar.
5. Plug the new lighthead connector into the connector found in the lighthead housing and snap the lighthead into place. Confirm all four retaining fingers fully engage the lighthead’s mounting tabs.
6. Reconnect the lightbar to the battery and test the operation of the newly installed lighthead. If the new lighthead does not function properly, contact customer service.
7. Return the items removed in step 3 to their original position and remount the endcap. Tighten mounting screws to 40 in./lbs.
