Introducing Whelen Command™

Designed to simplify control system programming, Whelen Command delivers the ability to program all Whelen control systems within one application.

HotKeys:

CTRL + **LMB** → Select rows of input, output, or modules. Will also deselect already selected rows

CTRL + **A** → Select all rows on page

CTRL + **D** → Deselect all rows on a page

SHFT + **LMB**x2 → Select all rows between point "A" and point "B"

CTRL + **C** → Copy

CTRL + **V** → Paste

CTRL + **S** → Save

CTRL + **O** → Open

CTRL + **T** → Open Transfer Manager

DELETE → Clears all programming on the selected outputs or modules in the lightbar. Name and color will NOT be affected

CTRL + **E** → Extract a configuration from a device

Nomenclature:

"**Rules**" changed to "**Events**"

"**Simulate pressing this button**" changed to "**Go to next state**"

"**Import .bxr**" changed to "**Import Device**"

"**LMB**" = Left mouse button
