

# Responder-To-Responder Alerts Now Available on the Whelen Cloud Platform<sup>®</sup>

NEW FEATURE RELEASE • MARKET ADVISORY

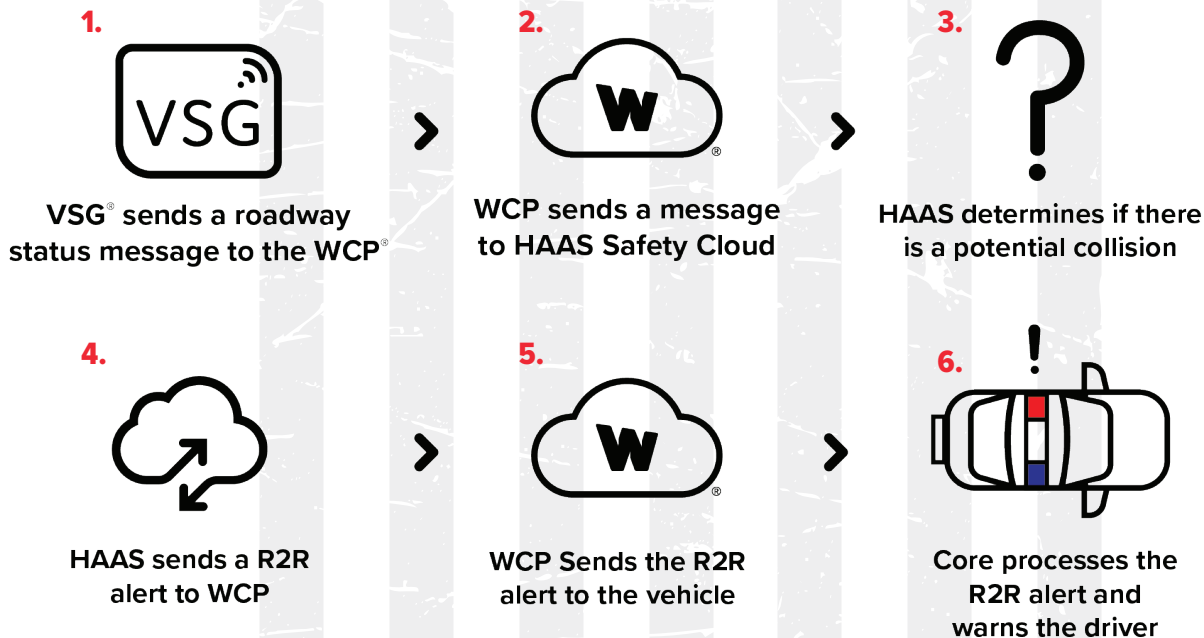

MA:0043 • 04/2023

The **Whelen Cloud Platform<sup>®</sup> (WCP<sup>®</sup>)** now offers **Responder-to-Responder** alerts (R2R<sup>™</sup>), a new safety feature designed to help prevent collisions between emergency response vehicles while en route to a scene.

R2R alerts work through **Safety Cloud<sup>®</sup> by HAAS Alert**, a cloud-based connected safety platform that enables the sharing of critical information between vehicles, infrastructure, and emergency services; **Whelen's Vehicle Safety Gateway<sup>®</sup>** and WCP to enhance emergency response times and improve the safety of first responders and the motoring public. WCP customers can program how they'd like to alert the driver when an R2R signal is received through their **Core<sup>™</sup>** control system.

Please contact your Whelen sales representative for more information.

## How R2R Alerts Work:
